Details of exposure MPRNs as of today

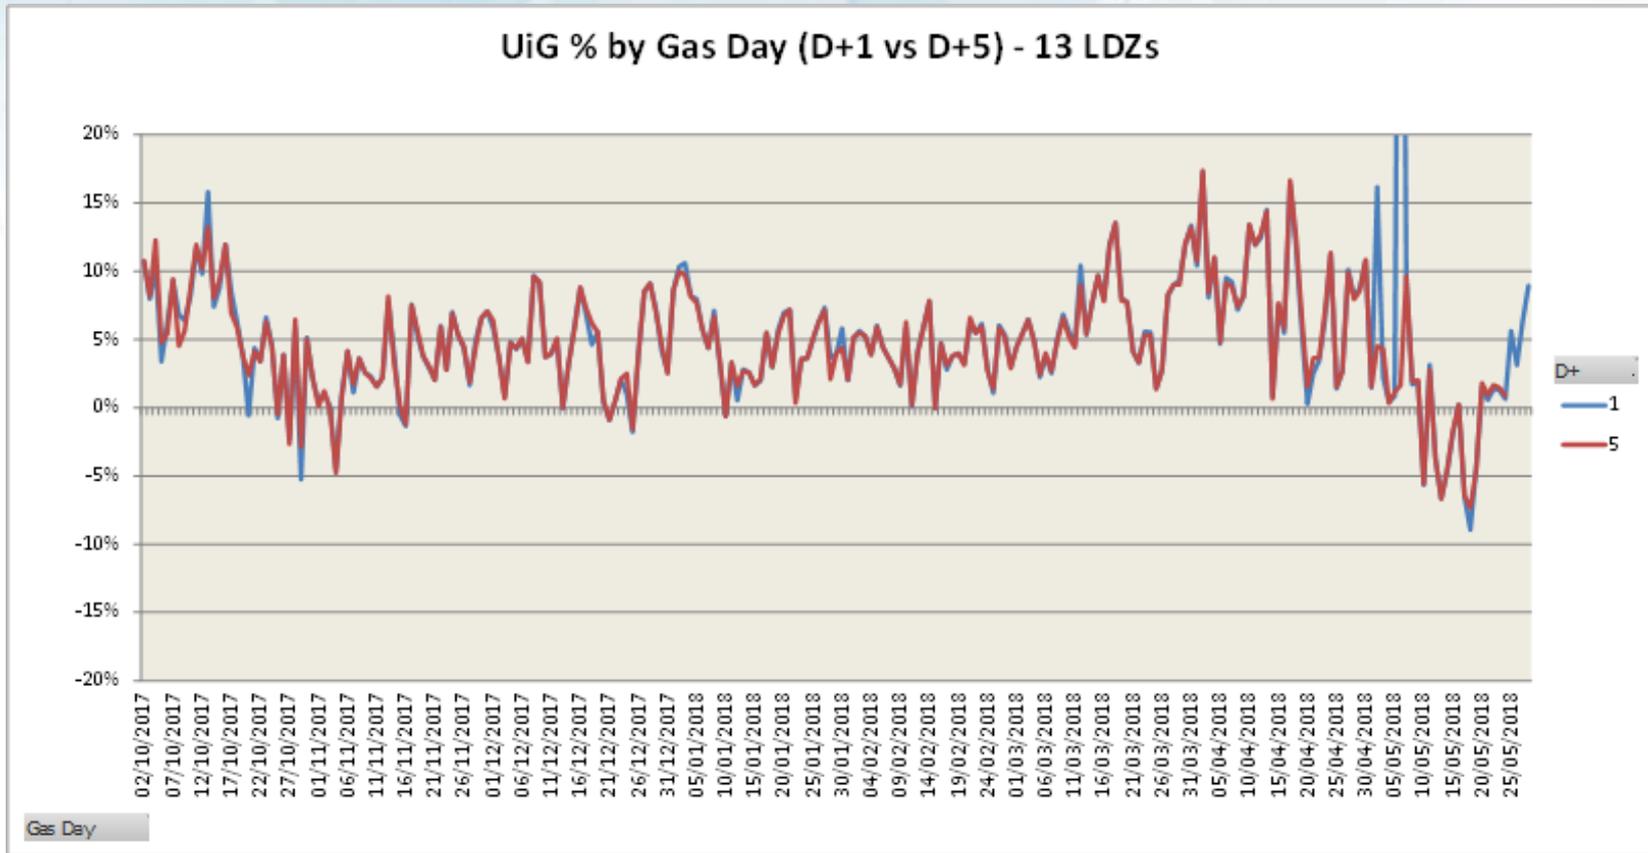

*Site AQs provided at the request of industry parties.*

*Please note that site AQ is not an indicator of the amount of any likely consumption adjustment: this is dependent on the duration of the issue and the magnitude of the difference (if any) between original estimates and actual usage, and to what extent the business-as-usual processes have not corrected the billed position.*

# Latest UIG Volatility

## Key Comments:

- Gas Day 2nd May 2018 - The majority of DM Measurements for this gas day were not present in the Gemini system, in time for the first run of Allocation. This resulted in erroneously high Unidentified Gas values across all LDZs. This issue was investigated and resolved in time for the second run of Allocation.
- Gas Day 6th May 2018 – NDM Allocation failed to calculate for this gas day on the first run of Allocation, affecting all LDZs. This resulted in erroneously high Unidentified Gas values (c70%) across all LDZs. This issue was investigated and resolved in time for the second run of Allocation.
