| <p>XRN3667a was raised to look at options on how Shippers can get visibility of the perspective formula year quantity values (AQ/SOQ) prior to them being issued out formally in late March. The formula year quantity values to become effective in the 1<sup>st</sup> April are actually calculated by UKL in December the previous year. Shippers (current and proposing) have stated that it would be of great benefit to be able to have visibility of these perspective quantity values in the case of a possible switching event (with end consumer consent obtained), as currently they are unable to effectively quote end consumers for the coming financial year causing quote errors and possible failures of switches.</p> <p>The permissions to allow Shippers access to the relevant data set via API was discussed and approved at DSC Contract Managers Committee (CoMC) on the 16<sup>th</sup> January 2019</p> <p>This API is a chargeable service, the delivery costs will be recovered via Shippers who sign up to the service.</p> <p>The service line associated with this initiative is <b>SS SA22 84</b>.</p> |  |                             |                       |                          |
